Mediasite App for Canvas
EMPOWER INSTRUCTORS & ENGAGE LEARNERS

Mediasite lets instructors, staff and authorized students easily record, upload, share and watch video in any Canvas course. The combined power of Canvas with Mediasite means all your videos have a central secure home benefiting from Mediasite’s in-video search, engagement tools and viewership stats.

DEEPEN ENGAGEMENT & IMPROVE LEARNING
It’s proven that videos embedded in Canvas enhance student learning. Mediasite synchronizes instructor video with lecture slides, whiteboard annotations, visualizer demos or other course content so students never miss a detail. Even on smartphones and tablets, they get the same rich video experience. Instructors can further deepen student engagement by adding:
• Interactive polls
• Question forums
• Chapters
• Post-video surveys

RECORD OR UPLOAD ANY VIDEO
With direct access to My Mediasite within Canvas, users record videos and screencasts for any course simply using their computer’s webcam and microphone. Video recorded with other devices like smartphones and tablets can also be uploaded. With support for nearly 100 formats including Flash®, QuickTime®, AVI, MP4, Windows Media® and more, the video upload options are endless. And it’s easy on administrators. Auto-placement of a My Mediasite link on the Canvas home or any course page streamlines deployment and management of personal video capture.

AUTOMATICALLY PUBLISH AND SHARE
Mediasite simplifies time-consuming steps to publish and share videos captured from classroom recorders, My Mediasite or mobile uploads. It automatically creates video catalogs and associated course resources, then adds a catalog link into Canvas’ course navigation and emails the instructor when their videos are ready to watch. Using Canvas’ familiar rich content editor, instructors can also add video to any course page themselves.

MEASURE THE IMPACT

Mediasite shows you exactly who is watching what videos, when and how long. It’s a powerful tool for correlating student viewing behaviors to learning outcomes, individual performance or overall content effectiveness. Each video’s at-a-glance dashboard and intensity map immediately show student engagement, most viewed segments and viewing drop off points.

SEARCH EVERYTHING

Mediasite makes all videos in Canvas as searchable as documents. Within any lecture or across an entire course, Mediasite SmartSearch scans both the media and metadata – including audio transcripts, slide content, handwriting, video and tags – to find and play from requested keywords.

PROTECT & STREAMLINE VIDEO ACCESS

Not every video is meant for everyone. Mediasite guarantees only authorized students have access by leveraging your school’s LDAP or Active Directory. Plus, support for single sign-on (SSO) means students and instructors use existing Canvas logins to access and watch videos. Mediasite also supports SAML 2.0 and Shibboleth, allowing security domains to seamlessly exchange authentication and authorization data.

SYSTEM REQUIREMENTS

- Mediasite Video Platform or Mediasite Cloud
  - 7.0.13 or later for Mediasite App for Canvas
  - 7.0.25 or later for Mediasite Courses for Canvas
- Canvas by Instructure
- LTI (Learning Tools Interoperability™)
- Download the Mediasite App for Canvas from EduAppCenter.com
